

**Nurhusein Abdulkader**

**Reflections week 2**

what do i want to learn or understand better?

(A) from last week I learned what I wanted to learn about software engineering, ie how the team works, how to put sprints, and even got a hum how to write backlogs, sprint backlogs and even user stories,

(B) What I want to do next is how to write sprint backlogs in detail and to write user stories using the agile method, I have also started to look at how android studio works, but i still need to learn a bit more to be able to enter codes already next week.

(A-> B) in order to achieve a good result, I need to be more involved in the team, be able to use all the tips that have taken place in the course and also read more on my own to have better understanding.

how can I help someone else, or the whole team, to learn something new?

(A) So far, there has not been any time where I needed to help someone, (B) in order to be able to help someone i our team i the coming weeks, I must first be able to learn things relevant to our project (A-> B ).

what is my contribution towards the team's application of Scrum?

(A)My contributions have been the same as last week, ie I've only been a part of the team.I have not yet contributed much enough to have a role as scrum master,

(B)To be a better participant in the team, I have to contribute more than I do today, i have also to take more responsibilities (A->B),

What is my contribution to the team's deliveries?

(A)I have not contributed anything to the team this week, I have missed an online meeting that our group had, I have not either contributed in the group reflection.

(B) for the next time, I want to contribute by participating in all meetings that our group have, as well as getting prepared and ready for all meetings that our group have (A-> B).
