

### **What do I want to learn or understand better?**

At this early stage I just want to have a clearer picture of Scrum and how to apply it to a project. Of course I know the basics, as we have been told and shown through slides and exercises, but I still am missing practical experience, which we will gain shortly (when the project commences). I am also curious about Android development since I have never developed a program/app for Android before.

### **How can I help someone else, or the entire team to learn something new?**

Since we are still in the first week, and since the project hasn't really started, I feel that there's not much I can do at the moment. If someone asks I can try to provide an answer, I don't think I can do much more than that.

### **What is my contribution towards the teams application of Scrum?**

This week we had the Lego exercise, and I was there and did my part, as did the rest of the team. At this early stage there's not that much more to do.

### **What is my contribution towards the teams deliveries?**

I'm just repeating myself, but at this early stage we do not have any real deliveries. We did the Lego exercise and I contributed to that, now I am writing this personal report.
