

Individual reflection, week 2

Christer Sonesson

What do I want to understand better?

Still the same as last week, I want to dive into the Android development tools and develop, but I have only just started. There is no pressing deadline at the moment and we have not yet started true development of the product, so I have not learnt much. The solution is obviously to just dive into the Android dev studio, but that will be solved soon enough when we actually start developing the product code.

How can I help someone else, or the entire team, to learn something new?

Same situation as last week, if someone asks I can try, but I can't do much else since we are all pretty much on the same level of knowledge at the moment.

What is my contribution towards my teams application of scrum?

I participate in the scrum-meetings but I do not drive them. I am a member of the scrum-team, not the scrum master, and I am perfectly happy with that position. This week we set up a trello-environment where we easily can visualise the scrum-process, I assisted with that effort.

What is my contribution towards the teams deliveries?

This week the main effort we did was setting up the scrum-environment and beginning to coordinate the team via discord. I did not drive these processes, but I assisted in the team effort.
