Reflections week 5

what do i want to learn or understand better?

(A) From previous weeks I learned about how software engineering would work, how to put sprints, and even got an idea how to write backlogs, sprint backlogs and even user stories, This week i was able to get start with The Android Studio, there i could put some code and use the Android Car emulator. This week i began to learn how the scrum would work in real, and even got more understanding about the agile from the lecturer and how to implement it on a team. I realized from previous weeks the importance of having a standup meeting, which shows how the big problems could be solved easily.

(B) What I want to do next, since i think that the Scrum, as a working method is not working perfectly, i want to take inspiration from companies that use Scrum, this to be able to work as efficiently as possible. Further i want to know more on how to write sprint backlogs in detail, My ambitions for the coming week is to understand more about the Car API and even have a better understanding on how the android Studio will work.

(A-> B) in order to achieve a good result, I need to be more involved in the team, ask questions to improve myself both as a programmer and as a team member, be able to use all the tips that have taken place in the course and also read more on my own to have better understanding.

how can I help someone else, or the whole team, to learn something new?

This week i was able to discuss some coding problem that occurred in the team, i want to continue to help and get help if it is needed.

In order to help someone in our team in the coming weeks, I must be able to have good understanding about the Android API, and also to refresh my skills on Java application Language in case someone would ask me.

what is my contribution towards the team's application of Scrum?

(A) My contributions this week to the Scrum was to be able to get started with plans to achieve the agile methods, I have contributed to the scrum by discussing some difficulties that occur with some issues as setting up the simple and even some coding problems. (B) next week i want to be able to be prepared well so that i will be able to discuss some coding solutions and even engage the team to have more standup meetings. (A->B) to achieve my goals with the scrum i have to work as team worker and even be available if someone needs help,

What is my contribution to the team's deliveries?

(A)

from previous week the team got started to take tasks from scrum board to implement it on the app, i got started with designing the store activity so a driver is able to use his/her points for shopping. i am almost done to implement the store activity with a driver is able to shop. There is some improvement sides that will be needed to be done and that will be done next week. thereafter my plan is to take some other task from scoreboard and even to contribute

by participating in all meetings that our group have, as well as getting prepared and get ready for all meetings that our group have (B).

in order that i deliver more i have to contribute by participating in all meetings that our group have, as well as getting prepared and ready for all meetings that our group have (A-> B).
