

Individual reflection, week 3
Christer Sonesson

What do I want to understand better?

At this time I have set up my Android studio environment, and I have got the simulator up and running. The next step is to continue learning how to work in Android studio, and to start chipping away at the project. The way I am planning to improve my knowledge of Android development is to create a very small program and get it to work on the simulator, possibly a hangman-application.

How can I help someone else, or the entire team, to learn something new?

I can just continue as I have before, to be ready to answer questions and do my best regarding my own goals.

What is my contribution towards my teams application of scrum?

This week the team had one scheduled meeting at school and one meeting in Discord, as well as minor exchanges on facebook. I was present for all scheduled meetings, and have asked questions when I needed to, to learn better. I have also helped with the team-reflections. In the future I will do pretty much the same thing, just do what's needed for this to be a constructive effort.

What is my contribution towards the teams deliveries?

This week the main goal for the team was to get the emulator up and running, and we have achieved this. My main contribution towards the deliveries was setting up my emulator, as well as helping out in non-development areas (attending meetings, team-reflections).
