What do I want to learn or understand better?

At this early stage I just want to have a clearer picture of Scrum and how to apply it to a project. Of course I know the basics, as we have been told and shown through slides and exercises, but I still am missing practical experience, which we will gain shortly (when the project commences). I am also curious about Android development since I have never developed a program/app for Android before. All this will be rectified by just attending the course and doing what's required, no special action is necessary.

How can I help someone else, or the entire team to learn something new?

Since we are still in the first week, and since the project hasn't really started, I feel that there's not much I can do at the moment. If someone asks I can try to provide an answer, I don't think I can do much more than that.

What is my contribution towards the teams application of Scrum?

This week we had the Lego exercise, and I was there and did my part, as did the rest of the team. At this early stage there's not that much more to do.

What is my contribution towards the teams deliveries?

I'm just repeating myself, but at this early stage we do not have any real deliveries. We did the Lego exercise and I contributed to that, now I am writing this personal report. In the future I will try to do more.
