DAT-256 Software Engineering individual reflection: Rickard Gyllensten

- **what do I want to learn or understand better?**

  To summarize my goals from last week i can happily say i succeeded to meet them. I've been participating in every exercise. During this week we meet with Volvo and semcon and got a more deep presentation about the project and tools to use(A). My hopes is to get started soon on the application and learn a lot more how to use the developer tool android studio(B). To accomplish this, I will try to learn with youtube tutorials regarding how to use android studio(A->B).

- **how can I help someone else, or the entire team, to learn something new?**

  As i mentioned in my last reflection, it is a group project and I am happy to share my knowledge regarding anything useful(A). I want to see some kind of forum och portal where this information easily can be shared and found(B). I will create a discord server this week and invite the team which we can use for both text information and VOIP(A->B).

- **what is my contribution towards the team's application of Scrum?**

  I'm part of the devoloperteam and this week I was part of setting up the scrum board using trello(A). As for next week i will try to complete some tasks and get the project started and going(B). To get there i really need to learn how to use android studio as i mentioned before(A->B).

- **what is my contribution towards the team's deliveries?**

  My contribution this week as been to create user stories and tasks. The application we decided to use was my idea with contribution from Daniel Cebe(A). My goal for next week is to be more active, contribute more the the team reflection and overall work more on the project(B). To get there i need to put more of my time on the project instead of the other course(A->B).
