Software Engineering

Individual Reflection Week 5

Tom Bjurenlind

- ## What do I want to learn or understand better?

This week I've learned more about the Android APIs and Android CAR APIs; acquired as a natural process by working off tasks off the Sprint backlog. What I would like to learn or understand better next week is further knowledge in the APIs and tools we're using. To to this I'm planning to continue to work on tasks for the app; and looking up things I'm unfamiliar with when I run into something I currently don't understand.

- ## How can I help someone else, or the entire team, to learn something new?

This week I have helped where I can with the Android APIs, and did so in person this time as well; during one of our weekly meetup sessions. In the future I continue to think this way of helping works best since it proved effective this week again. To continue to be helpful in this way, my team will have to continue to meet up in person at group meetings at least once a week.

- ## What is my contribution towards the team's application of Scrum?

My contribution to the team's application of Scrum this week was helping whoever needed assistance where I could during our weekly meetings; as outlined above. Next week I want to continue helping whenever I can as well as continue working with tasks for the app. To do this I have to be active in taking on appropriate workload for the app Sprint backlog tasks and be available to help if someone happens to need my assistance with something.

- ## What is my contribution towards the team's deliveries?

This week my direct contribution to the team's deliveries (i.e. tasks) was implementing a way to nicely display the number of passengers currently in the car (with a visual image of a top-down 4-seat car). Additionally I fixed the issues described in the corresponding question last week; regarding the belt sensors. Next week I want to grab another available task from our backlog and work with it, and possibly coming up with new ones if needed. To get there I have to possibly look into further possible features to our app, discuss this with my team, and then pick an available task to work with, whether new or existing.
