Software Engineering

Individual Reflection Week 6

Tom Bjurenlind

- ## What do I want to learn or understand better?

This week I've learned some more about the Android APIs once again, and working in a team in general; as well as all tools and methodology that come with it (e.g. Agile, VCS, Scrum Board, Team Chat, etc.). What I would like to learn or understand better next week is further knowledge into the APIs and the tools we're using; and of course get further experience in collaborating in a bigger team for a project. To to this I'm planning to continue to work on tasks for the app, trying to come up with things to improve the app if we're out of tasks, and obviously looking up things I'm unfamiliar with if I run into something I currently don't comprehend fully.

- ## How can I help someone else, or the entire team, to learn something new?

Currently I still think the best way to help a team member out is in person. This week I could unfortunately not attend the group's weekly meeting, but I've tried helping when needed in the group's chat room. Next week I plan to attend the group's weekly meeting if we decide to have one, so we can discuss what's next on the agenda (since we're currently out of core tasks to grab from our Scrum Board), and help my team members out in person if someone needs help with anything.

- ## What is my contribution towards the team's application of Scrum?

My contribution to the team's application of Scrum this week was helping whoever needed assistance where I could through our group chat as well as finishing off my tasks as a Scrum Team Member. Next week I want to continue helping whoever and whenever I can as well as possibly continue polishing on "finished" tasks, and perhaps formulate and take on a new task for the app (currently no "free" tasks left on Scrum Board). To do this I plan to be active in taking on appropriate workload for the app Sprint backlog tasks (currently empty, so perhaps come up with a new small task to work on) and be available to help if someone happens to need my assistance with anything.

- ## What is my contribution towards the team's deliveries?

This week my direct contribution to the team's deliveries was revising my contributions from the last week; which specifically encompassed coming up with a more appropriate way to display the passengers in their seats (too many combinations), as well as modifying our car simulation script to turn off all belt sensors and engine sensor at the end of the

simulation. Next week I want to either formulate and take on a new feature/task for the app, or polish/revise the features we already have implemented. We might also have some separate features which needs to be "integrated" to work together appropriately as well. Besides this I'd love to help my team members with any unfinished tasks of theirs if my assistance is requested. To accomplish this I have to possibly look into further possible features for our app and grab one of these to work on, hook all separate features together into a fully functional application together with my team (when all core tasks are finished; which they almost are) and be available for assistance when needed.
